

6 Questions Every Sheriff Must Answer to Prevent Cyber Disaster

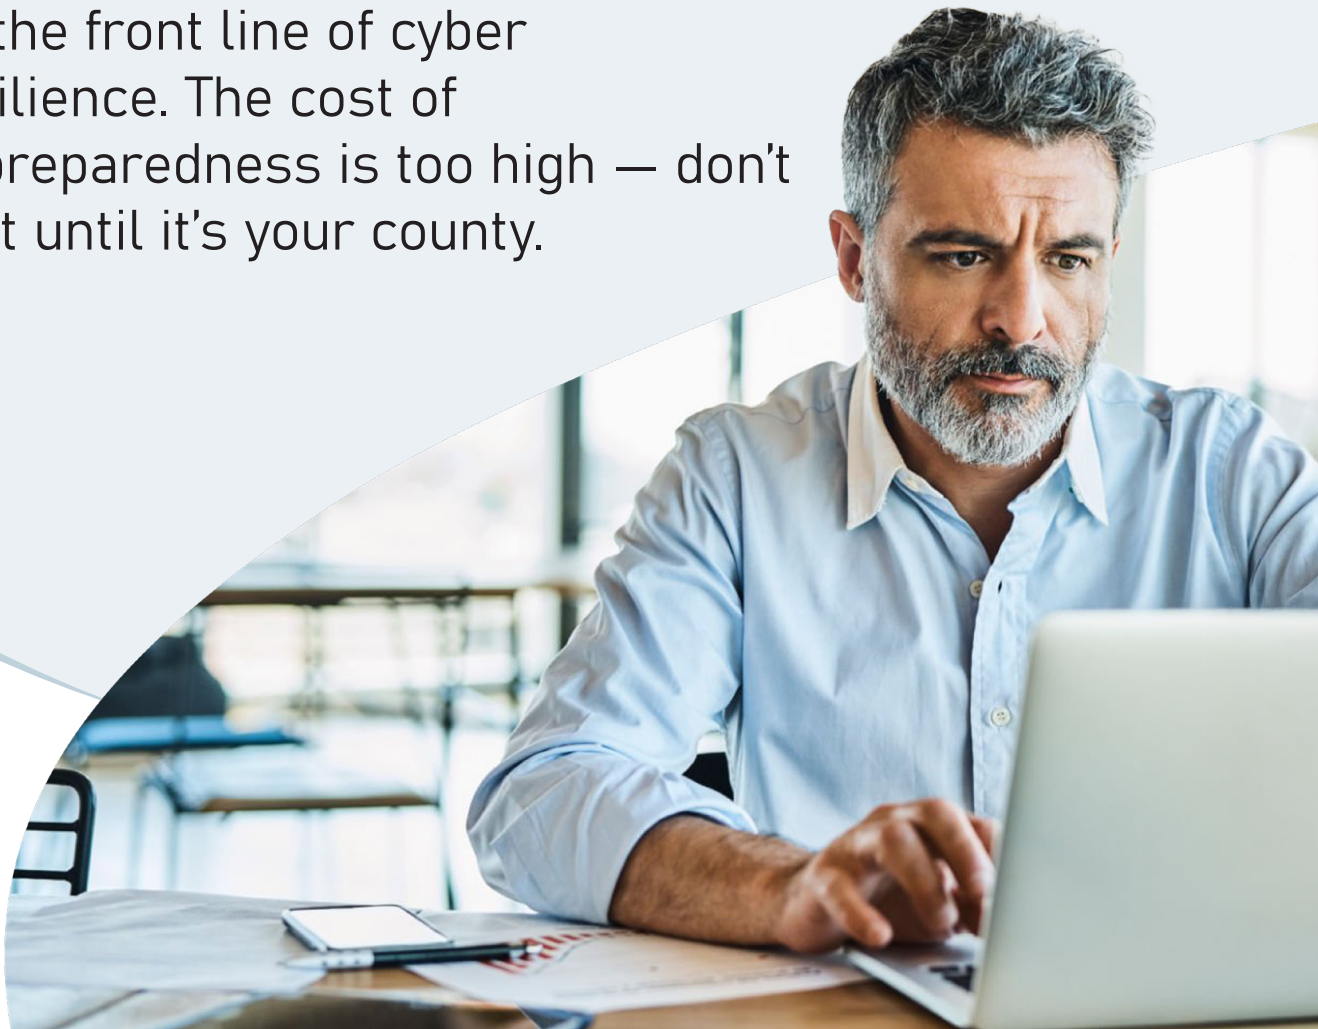

The Sheriff's Cyber Readiness Checklist

Cyber threats aren't *IF*, but *WHEN*.
Will *YOUR* office be ready when it happens?

A California county recently lost over 5 years of data and paid \$1M in ransom after a devastating cyber attack. Civil services were crippled for over a year.

This is the new reality: Sheriffs are on the front line of cyber resilience. The cost of unpreparedness is too high — don't wait until it's your county.

6 Questions Every Sheriff Must Answer to Prevent Cyber Disaster

Checklist:

Every Sheriff needs a cyber readiness plan. Use this checklist to see how your office measures up.

- ☐ **Response Time (RTO):** How quickly can you restore critical services?
- ☐ **Data Protection (RPO):** What measures are in place to prevent data loss?
- ☐ **Accountability:** Who oversees cybersecurity in your department?
- ☐ **Recovery Plan:** Is there a comprehensive DR strategy for redeployment?
- ☐ **Communication Protocol:** How will you notify affected parties and the public?
- ☐ **Insurance Coverage:** Does your county have adequate cyber liability insurance and is there a clause not to pay ransom?

Cyber resilience isn't a luxury — it's mission critical.

Protecting county operations requires proactive steps:

-  Conduct regular risk assessments
-  Implement robust backup and recovery systems aligned with your RPO
-  Provide ongoing cybersecurity and DR training for staff
-  Develop and test an incident response plan to meet your RPO
-  Ensure up-to-date security measures across all systems

The Safest Path Forward is the cloud.

Teleosoft's cloud-based services provide:

Enhanced security protocols

Automatic backups and disaster recovery

Scalability to meet evolving needs

Continuous updates and patch management

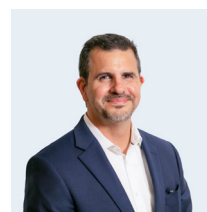

24/7 monitoring and support

Don't wait for a cyber attack to test your readiness.

Schedule a Discovery Call with Teleosoft and find out how your office measures up!
