Moving County Operations to the Cloud

Local server environments are becoming harder to sustain as cyber risk rises, infrastructure ages, and continuity expectations increase. Cloud hosting gives county offices and IT teams a more resilient, supportable foundation for the work that cannot stop.

Stronger cybersecurity

Enterprise monitoring, continuous patching, and resilient backups reduce exposure to ransomware and data loss.

No server lifecycle to manage

Eliminates hardware refresh cycles, unexpected repairs, and the operational risk of aging equipment.

Performance that grows with demand

Handles increasing case volume, digital records, and online services without capacity planning challenges.

Future-ready operations

Supports transparency, audit readiness, and digital services while providing a more sustainable budgeting model that strengthens long-term public confidence.

Reliable continuity of operations

Cloud environments help keep systems available during outages, disasters, and infrastructure failures.

Secure access beyond the courthouse

Supports staff, deputies, and partners working across facilities or remotely without compromising security.

Reduced burden on County IT

Removes day-to-day infrastructure responsibilities so IT teams can focus on strategic priorities.

Why counties are feeling pressure

Cyber incidents are more visible and disruptive

Ransomware events affect operations, public service, and community trust — not just IT systems.

Infrastructure is aging while expectations grow

Refresh cycles slip as systems become more complex and resources remain limited.

Local disruptions create single points of failure

Power outages, facility issues, and regional disasters expose the limits of server-room dependency.

Teleosoft's cloud-based platform streamlines the civil process

Why counties are moving to the cloud

Transfers infrastructure risk

Responsibility for uptime, patching, and recovery shifts away from local facilities to environments designed for resilience.

Creates a more supportable environment

Systems can be patched, maintained, and supported more consistently when infrastructure is purpose-built for the application.
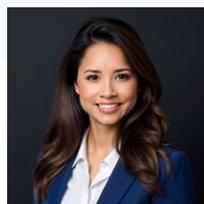

Strengthens the relationship between county offices

IT teams maintain governance and security standards without carrying the full infrastructure burden, while sheriff and court operations gain more reliable continuity.

Let's start the conversation

Built for county teams — backed by Microsoft Azure Government cloud.

Let's discuss your county's path to cloud hosting and continuity planning.
